- Experience managing cross-functional teams
- Management of external partner timetables and deliverables

Tools Used

- Ixiasoft - Web Author and Eclipse DITA authoring
- XMetal - DITA authoring
- Word
- Jira
- FrameMaker - DITA authoring
- SharePoint Development
- Adobe Illustrator and Acrobat Pro

Education

Bachelor of Arts, University of Montana, Missoula, Montana - Major: History; Minor: Economics.
Post-graduate work in Applied Information Management, University of Oregon

Experience

ADP – Technical Writer/Content Developer June 2022 – October 2025

Create and administer associate-facing content using DITA methodologies. Internal consulting with ADP business units on legacy content migration and Salesforce knowledge module implementation. Part of a team that is developing a ChatGPT-based DITA refactoring application.

Nike EAP/CSE – Technical Communications June 2021 – Aug 2021

Launch support and engagement within corporate Nike for open-source data tools. Used Visio and Confluence to storyboard data analysis processes using open source tools (Kafka, NiFi, etc.)

Senior Technical Writer – VersaLogic Corp Aug 2016 – June 2021

Owned all embedded Intel x86 architecture-based technical documentation from product development to end-of-life. This includes product development using Jira for agile development methodologies, research, review and existing document revision. I was the only technical writer and owned all public-facing hardware and software technical documentation. In 2017, I oversaw the largest release of new product documentation in the history of the company.

Senior Technical Writer/ DITA Development, Intel Corporation, Hillsboro, OR July 2009 – Aug 2016

Developed online customer documentation for Intel modem and gateway products using DITA and XML tools

- Technical writing, legal editing and trademark and branding
- Managed the information repository and system
- Contact for subject matter experts and other key stakeholders

Senior Technical Writer/ Documentation Management, Intel PCCG, Hillsboro, OR

Responsible for supporting the Intel x86 architecture notebook, tablet and desktop documentation and managing customer access to that documentation. Main responsibilities included creating, maintaining and forecasting customer-focused technical collateral as well as managing NDA access to confidential and restricted secret customer material.

- Technical writing, legal editing and trademark and branding
- Contact point for all collateral distribution systems
- Team lead for managing Intel Confidential documentation

Operations Manager, Intel ESAA Software Solution - Intel Corporation, Hillsboro, OR 2000 – June 2009

The Intel ESAA program accelerates delivery of integrated, validated Intel Xeon and x86 hardware and software solutions to Intel OEM customers and resellers, allowing companies to compete more effectively with large, global system integrators.

- Key player on team that oversaw program growth from 20 to 2000 members over 8 years
- Managed day-to-day operations of engineering, managerial, marketing, and web development cross-divisional teams
- Managed external partner relationships with software vendors and hardware resellers
- Provided business analytics to Intel management and external ESAA partners that drove strategic business direction
- Created, edited and validated over 300 technical software installation documents
- Provided technical support to hardware resellers, strategic customers, and internal stakeholders

Project Manager/Business Unit Web Manager - Intel Corporation, Hillsboro, OR 2004 – 2006

Increased traffic to the server product main page and associated product family pages by 3x as sole content manager for Intel Corporation's public-facing server product web pages. This increase in traffic was accomplished by managing intra-corporate teams which included marketing, web development, and management roles.

- Oversaw all facets of Intel® Xeon® and x86 server product web page: Design, development, marketing, technical knowledge
- Instituted metrics-based design and decision-making by providing management with deep web metrics on a monthly basis

Oracle Developer/Performance Analyst – Worksystems Inc. Portland, OR 1998 - 2000

Developer of internet-based government transmissions, reports and queries which ensured fact-based policy decisions and enabled contract compliance by management. Lead developer in user-based database and forms design. Analyzed and presented performance data in various formats to State and Federal Agencies, Worksystems management and board, and local officials. Position required a firm understanding of Federal workforce development law and application to state, county, and local agencies.

- Database Design (schema, table, and query design and implementation)
- Complex project management responsibilities
- Large database implementation (both fiscal and technical)
- Regional expert in Workforce Implementation Act compliance
- Data analysis and publication
- Editor of Regional Workforce informational newsletter for three years

Senior Instructor, University of Oregon Continuation Center 1990-1998

Instructor with responsibility for needs assessment, course development, and continuous improvement of computer and technical corporate training classes. Students and teaching peers constantly evaluated instructors and materials for technical accuracy and quality. Courses were carefully crafted to meet the needs of students representing a variety of industries and a range of computer knowledge. The position required the ability to understand and attend to the needs of a variety of students. Senior Instructors have the additional responsibility of making decisions and recommendations on curriculum and class offerings in addition to normal instructor duties.

- Performed all instructional design and training for technical training and computer courses
- Technical course development
- Kept pace with changing software capabilities and demands
- Staff development/mentoring
- Corporate training contract negotiation
